(1) Overview

(Korea Standard Time, KST: UTC+9, Population: 51.8 million)

1. Major Societies

Most of Korean scientists and engineers in thermal science and engineering (or more specifically heat and mass transfer) belong to the Thermal Engineering Division of the Korean Society of Mechanical Engineers (KSME; approximately 27,000 registered members), Division of Nuclear Thermal Hydraulics of Korean Nuclear Society (KNS; approximately 5,000 registered members), Society of Air-conditioning and Refrigerating Engineers of Korea (SAREK; approximately 9,000 registered members), and/or Korean Society of Combustion (KOSCO; approximately 800 registered members). KSME-TED is a core society of heat and mass transfer in Korea.

2. Major Meetings

Thermal Engineering Conferences by KSME-TED
 during Spring (April) of KSME-TED and Fall Annual Meeting of KSME (November)
 Place: mostly Hotel or Convention Center around the country

Seasonal Conferences by KNS
 during Spring (May) and Autumn (October) Annual Meetings
 Place: mostly Hotel or Convention Center around the country

Seasonal Conference by SAREK
 during summer (June) and winter (November)
 Place: mostly Hotel or Convention Center around the country

Seasonal Conference by KOSCO
 during spring (May) and winter (November)
 Place: mostly Hotel or Convention Center around the country

3. Major Journals

- KSME
 - Journal of Mechanical Science and Technology (in English, monthly)
 - JMST Advances (in English, quarterly)
 - Transactions of the KSME A/B/C (in Korean, monthly)
- KNS
 - Nuclear Engineering and Technology (in English, monthly)
- SAREK
 - International Journal of Air-Conditioning and Refrigeration (in English, quarterly)
 - Korean Journal of Air-Conditioning and Refrigeration Engineering (in Korean, monthly)
- KOSCO
 - Journal of The Korean Society of Combustion (in Korean, quarterly)

4. Education (Undergraduate/Graduate School)

- Elementary School, 6 years; Middle School, 3 years; High School, 3 years; Undergraduate School, 4 years.
- In most universities, the first semester starts in March, while the second semester starts in September.
- Most of undergraduate school education is carried out by using English textbooks, and some of the lectures are taught in English.
- Master course is usually 2 years, and Doctor course is 4 years on average (integrated Ph.D. course is often 5 years).
- Recently, there exist growing needs for female or international faculty in engineering schools.

5. University System

- Tenure-track professors are usually independent and run their own laboratory (similar to the US university system).
- At most of universities, the retirement age is 65.

6. Foundations of Scientific Research

- National Research Foundation of Korea (NRF)
- Korea Institute of Energy Technology Evaluation and Planning (KETEP)
- Korea Evaluation Institute of Industrial Technology (KEIT)

7. Major Public Research Institutes

- Korea Institute of Machinery and Materials (KIMM)
- Korea Atomic Energy Research Institute (KAERI)
- Korea Institute of Science and Technology (KIST)
- Korea Institute of Energy Research (KIER)
- Korea Institute of Industrial Technology (KITECH)

8. Addendum

Korean is the national language of both North Korea and South Korea. Modern Korean is written in Hangeul, i.e., Korean alphabet that was originally developed by King Sejong in 1446. Modern Hangeul uses 24 basic letters (14 consonant letters and 10 vowel letters) just like the modern English alphabet.

便 : 사 · 새 · 내 · 문 · 무 · 이 · 文 · 나

Ji Hwan Jeong, School of Mech. Eng., Pusan National University
jjhwan@pusan.ac.kr <https://rtl.pusan.ac.kr>

Most Korean scientists and engineers in heat and mass transfer belong to the Thermal Engineering Division of the Korean Society of Mechanical Engineers (KSME), Division of Nuclear Thermal Hydraulics of the Korean Nuclear Society (KNS), Society of Air-conditioning and Refrigerating Engineers of Korea (SAREK). The following are the past and future international conferences at which the aforementioned societies take leadership roles.

Internal Symposium on Oscillating & Pulsating Heat Pipe (ISOPHP), September 2019, KAIST, Korea

- Symposium consisted of 4 keynote lectures, 7 oral sessions, and 1 poster session.
- There was a panel discussion titled “Status of PHP Applications in Industry” organized by Prof. J. Thome.

13th International Energy Agency Heat Pump Conference (HPC2020), April 2021, Jeju, Korea

- There were 3 plenary lectures, 36 keynote lectures, 36 oral sessions, and 4 poster tracks.

27th IIR International Congress of Refrigeration (ICR2027), August 2027, Seoul, Korea

- Conference chair: Prof. Yong Tae Kang (SAREK President)
- Congress program will provide plenary sessions, short courses, technical sessions, panel and forum sessions, technical seminars for industrial sponsors, technical excursions, and general tours for accompanying persons as well as IIR meetings, reception, banquet, etc. during 5 days.

9th Korea-China Workshop on Nuclear Reactor Thermal-Hydraulics (WORTH-9), May, 2019, Chongqing, China

- Co-organizing of the conference
- Conference co-chair: Dr. Chul Hwa Song (Korea Atomic Energy Research Institute)
- There were 2 plenary lectures, 8 keynote lectures, 15 oral sessions, 6 post sessions and 100 participants.

11th Symposium Japan-Korea Symposium on Nuclear Thermal Hydraulics and Safety (NTHAS-11), November 2018, Busan, Korea

- Biennial international joint workshop between Korean and Japanese nuclear energy societies
- Conference chair: Dr. Young Seok Bang (Korea Institute of Nuclear Safety)
- There were 4 plenary lectures, 6 keynote lectures, 24 oral sessions, and 200 participants.

12th Symposium Japan-Korea Symposium on Nuclear Thermal Hydraulics and Safety (NTHAS-12), October 30-November 2, 2022, Miyazaki, Japan

- Co-organizing of the conference
- Conference co-chair: Prof. Jae Jun Jeong (Pusan National University)
- Conference program will provide plenary sessions, keynote lectures and technical sessions.

2. Report on Thermal Engineering Conference (Spring 2022)

April 20 – 22, 2022 in Gyeongju-si

Hyunjin Lee, Dept. of Mech. Eng., Kookmin University
hyunjinlee@kookmin.ac.kr <https://relab.kookmin.ac.kr>
Bong Jae Lee, Dept. of Mech. Eng., KAIST
bongjae.lee@kaist.ac.kr <https://trad.kaist.ac.kr>

The Thermal & Fluid Engineering Division of KSME was established in 1980, and the first Thermal & Fluid Engineering conference was held in 1993. In 1998, the Thermal Engineering Division (TED) was separated, and the Thermal Engineering Conference has been independently held ever since. This year, KSME TED was able to organize a fully in-person conference from April 20–22 in Gyeongju-si, Korea. There were 535 attendees and 292 presentations (205 Oral and 87 Poster) about all areas of heat and mass transfer (see Fig. 2 below).

Fig. 2 Sessions (total 292 presentations)

1. Report on the Korean Society of Mechanical Engineering (KSME) Annual Meeting 2022

Wonyoung Lee, School of Mechanical Engineering, Sungkyunkwan University
leewy@skku.edu <http://eclab.skku.edu>

Taesung Kim, School of Mechanical Engineering, Sungkyunkwan University
tkim@skku.edu <http://nptl.skku.edu>

KSME Annual Meeting took place face-to-face during November 9 to 12, 2022 in Jeju, South Korea. Totally 1206 papers were presented including 66 keynotes through 13 divisions in the conference. The share of number of the presentation in each division is seen in a pie chart below. In Thermal Engineering Division, totally 173 papers were presented including 5 keynotes through 29 sessions. Keynotes speeches were “Estimation of airborne virus transmission from indoor air-conditioning units” by Prof. Man Yeong Ha, Pusan National University, “Hydrogen turbine” by Prof. Tong Seop Kim, Inha University, “Thermal-hydraulic characteristic of fluids in open-cell porous metal fins” by Prof. Ji Hwan Jeong, Pusan National University, “Machine learning-based signal quantification in optical diagnostics for real-time monitoring of chemical reactors” by Prof. Moonsoo Park, Sungkyunkwan University, “Energy harvesting performance of thermoelectric generator and photovoltaic systems” by Prof. Tae Young Kim, Seoul National University of Science and Technology, and “Plasma applications” by Dr. Hyeong-U Kim, Korea Institute of Machinery & Materials.

Fig. 2.1 Number of presentations at KSME Annual Meeting 2022

2. Special Topics in Journal of the KSME

Wonyoung Lee, School of Mechanical Engineering, Sungkyunkwan University
leewy@skku.edu <http://eclab.skku.edu>

Taesung Kim, School of Mechanical Engineering, Sungkyunkwan University
tkim@skku.edu <http://nptl.skku.edu>

The Korean Society of Mechanical Engineering (KSME) publishes the monthly Journal of the KSME. In addition to the trends in mechanical engineering, this journal provides information on the Internet, new technologies, new products, software, laboratories, and patents. It also contains interesting stories about our daily lives, such as university club introductions, essays, health information, life medicine, leisure, and more. The latest issue in February, 2023 contains the special topics about the recent trends in air conditioning and refrigerating systems. Six articles are published, including “R1233zd refrigerant based turbo refrigerating systems” by Dr. Cheolmin Kim, LG Electronics, “Dehumidifying air conditioning systems” by Dr. Insoo Hwang, Jyung Dong Navien, “Thermal air-conditioning systems for carbon net-zero” by Dr. Sungmin Woo, Samjungtech. “Mix-matrix membrane based dehumidifiers” by Prof. Minsung Kim, Joongang Chung-Ang University, “Solar radiation model research and applications” by Prof. Hyunjin Lee, Kookmin University, and “Polymer-based rotary regenerator type heat exchangers” by Prof. Dong-Wook Oh, Chosun University.

3. Industry-Academia Joint Lecture on Next Generation HVAC-R

Jaeseon Lee Dept. of Mech. Eng., UNIST, JaeseonLee@unist.ac.kr

The Thermal Engineering Division (TED) of the Korean Society of Mechanical Engineers (KSME) held a seminar on new technology trends related to next-generation HVAC-R in collaboration with industry and academia. This joint seminar was held between October 20 and 21, 2022 in Yeosu, a southern seashore city in South Korea. In the first session of the seminar, speakers from the industry gave presentations on changes in the refrigeration and air conditioning industry following energy efficiency improvements, environmental regulations, and carbon neutrality. Three speakers from the industry conducted the seminar, and the topics of each presentation were as follows.

- ‘Introduction of main technologies of turbo chiller applied with alternative refrigerant (R1233zd)’, Cholmin Kim, LG electronics Co.
 - ‘Domestic dehumidification cooling system’, Insu Hwang, Kyungdong Navien Co.
 - ‘The Role of Thermally Driven Chiller for Carbon Neutrality’, Sungmin Woo, Samjung Tech. Co.
- Three speakers from academia gave lectures related to the issue, and the following topics were given.
- ‘Dehumidification technology using non-porous mix-matrix membrane’, Minsung Kim, Dept. of Mech. Eng. Chungang Univ.
 - ‘Research and application of solar radiation model’, Hyunjin Lee, Dept. of Mech. Eng. Kookmin Univ.
 - ‘An experimental study on the application of polymer materials to rotary regenerative heat exchangers’, Dongwook Oh, Dept. of Mech. Eng. Chosun Univ.

This seminar became an opportunity for 30 researchers in addition to 6 presenters to share various technical discussions and exchanges. The seminar is an annual event hosted by KSME TED. It was held on-line last year due to Covid-19 and then this year, it was held off-line again, so the enthusiasm for participation was high. In 2023, it is expected that the industry and academia will gather together again to become a venue for exchange on various topics related to thermal engineering.
